

Coup de Grace for Imposed Ignorance

Thankfully the iron curtain of elitist imposed ignorance is falling. It is most fitting that the perestroika moment for humanity and our new century of truth based reality began with the final and most ambitious of the elitist power grabs, the theater of the absurd global warmists.

In recent weeks the Catholic Church rubber stamped a Papal Announcement on human caused global warming and endorsed the Anthropocene with the threat that ‘humans were going to have to live in the world they have created.’ For those of us with trust in humanity, that moment cannot come moment too soon.

So what would possess the church to create the modern equivalent of the Pontifical Academy Trial of Galileo ? Well, it could be that the wise Vatican investors got an insider’s investment tip that the global warming science was government funded certainty and that the carbon commodity trading would be a guaranteed growth market.

With an estimated 30% of the Nuns & Priests retirement fund ‘invested’ in a commodity that shrank from \$100 per ton to \$0.05 per ton in 2010, what is a good Pope to do ? It is a clear choice whether to fleece the brothers and sisters of the cloth or the flock. The Pope chose to spare the shepherds and fleece the sheep.

Much has already been written about this greatest of human watershed events since the original Renaissance. Much more will be written before the Nouveau Renaissance is complete. As a lifelong student of science and history, an independent thinker and a latent agitator, I chose to enter this greatest of human debates .

I have been blessed in this venture with trusting web hosts and an equally qualified, dedicated group of science professionals. Science is an iterative process, with properly gathered and analyzed empirical data always guiding the scientist to the hidden truths of reality. Nature may withhold the truth, but readily exposes the lie.

And so it is with ‘Carbon Dioxide caused climate change’ hypothesis, a predetermined outcome that ‘we needed energy taxes’ and a willing group of science sell-outs who would create any hypothesis and data necessary to meet that goal. To accomplish this greatest FRAUD in all human history took an international cast of villains and an elaborate plan.

In his excellent investigation of one critical aspect of the scam, author A W Montford exposes the shabby history of *The Hockey Stick Illusion*. This book covers the dogged efforts of Steve McIntyre and his associate Ross McKittrick to unravel the deceitful graphic that was to mobilize the carbon tax movement. Montford’s 450 page work is exhaustive, but consider these two quotes:

Climatologists Rosanne D'Arrigo and Gordon Jacoby had produced temperature record based on ten sites out of 36 sites studied. When it was suggested that this might be 'cherry-picking' data for a predetermined outcome, Jacoby responded:

“If we get a good climatic story from a chronology, we write a paper using it. that is our funded mission. It does not make sense to expend on marginal or poor data and it is a waste of agency and taxpayer dollars. The rejected data are set aside and not archived.”

Taxpayers funded a wide range of data collection and then the agenda driven gatekeepers destroyed all data that did not fit the required narrative. News of gross statistical errors and selective data use prompted Congress to demand an investigation of the UN IPCC claims. Rather than allow our elected officials to ask embarrassing questions or provide testimony from non-managed witnesses, the great protector of government science fraud, the National Academy of Science offered to investigate the allegations.

After days of testimony that proved the 'hockey stick' was at best questionable, the NAS panel “had been forced to rely on the somewhat dubious argument that Mann had used incorrect methods and inappropriate data but had somehow still managed to reach the right answer.” In this case the “right answer” was what the government funded NAS was requested to find by the government.

If the 'fox guarding the henhouse' aspect of the government investigating itself sounds troubling, the twisted peer review process is even more disturbing. Montford provides a 'spider chart' showing the interconnection of government funded Climatologists being the only scientist to review their own work. As the Climate-gate emails disclose, the 'hockey stick team' had no problem retaliating against the editors or the scientific journals who dared oppose the warming mantra.

Given the massive taxation and regulation that was proposed there was the foreseeable problem of scientific opposition. The goal was always to focus all climate behavior on the atmosphere. The highest objective was to demonize carbon dioxide for tax and control purposes, failing that to at least keep the option of aerial spraying for geo-engineering. The debate managers needed a controlled science position to counter the warmists.

Where the alarmist warmists would claim a 3°C temperature rise and 3 meter sea level rise, the soon labeled 'Luke Warmists' would claim that it would only be 1°C and 1 meter sea level rise. The narrative was then reinforced by NEVER confronting the false premise, but only the degree of change. In his article “The Corporate Climate Coup”, historian David F Nobel documents how the elitists created and funded the 'two sides' of this faux debate. [1]

The carbon dioxide forcing and back radiation narrative were complete fictitious fabrications. What the warmists and the luke warmist collaborators have tried to claim is that all weather and climate is the result of a human caused trace gas. What is missing are the two great heat sources of the Sun and the Earth's internal fission. It is fluctuations in these two great energy forces that are the real climate drivers, and humans have no influence over either force.

Many fine scientists have explored the solar factors in Earth's climate, while I have concentrated my efforts on the under-researched Earth fission factor. I have an extensive lecture series covering this subject in archive at ClimateRealists.com, at CanadaFreePress.com and at my website FauxScienceSlayers.com. My chapter in the co-authored science text, *Slaying the Sky Dragon* combines and expands this fission research in one location.

As mentioned earlier, science is an iterative process and since the publishing of our epic science book my co-authors, aka "Slayers" have become what science peer review groups should be, an international, interdisciplinary team of professionals dedicated to finding and sharing the truth. We have expanded the number of Slayers and our scope. There has been ongoing research and a number of updates. It is now time to update two of the previous articles.

In late Jan, 2011 the Slayers engaged a group of Luke Warmists in an on-line peer review. The result was that we realized the Lukes were clueless about the Outgoing Longwave Radiation (OLR) that they claimed was trapped by CO₂ and then warming the planet. My article, "OMG...Maximum Carbon Dioxide Will Warm for 20 Milliseconds" [2] explained that since OLR moved at the speed of light there could only be very limited 'dwell' time between Earth's surface and outer space.

Fellow Slayer, Dr Nasif Nahle was kind enough to provide the calculations for the total number of 'absorption/emission' impacts in this transmission, hence the referenced 20 milliseconds. As the Slayers examined the dynamics of the absorption/emission process it was noted that there is a shift during this process to a longer wavelength and lower frequency energy transmission.

This shift moves the photon out of the CO₂ spectrum range, making it 'invisible' to CO₂ molecules higher up in the air column. This greatly reduced the number of OLR impacts and the transit time. The revised length of time that OLR is delayed by Carbon Dioxide is now less than 5 milliseconds, as explained in "Mean Free Path Length Photons" available here [3].

The next refinement of the Earth fission factor was my article “Earth’s Missing Geothermal Flux” [4] which describes two previously unrecognized processes where hot ‘elemental’ gases are first converted to liquid and then outgassed in the water column. Both of these processes involve massive amounts of heat exchange.

I will now amend the Missing Flux to add the internal production of Hydrocarbons. As mentioned in “Fossil Fuel is Nuclear Waste” [5] the Earth produces ‘elemental’ petroleum. This product is molecularly stored energy with nearly a million BTUs per cubic foot. The Earth has 310 million cubic miles of ocean and many millions of cubic miles of stored Hydrocarbon energy from this hidden Geothermal Flux.

The next update to the “Missing Flux” article is courtesy of Geologist Timothy Casey and his article “Volcanic Carbon Dioxide” [6] which quantifies the massive amounts of ‘natural’ CO₂. Casey quotes Hillier & Watts (2007) that there are an estimated 3,470,000 submarine volcanoes worldwide and 4% are considered active.

These volcanoes, along with rift zones release a number of high temperature, high pressure gases which condense. Then, referring to this elemental CO₂ Casey say, “under special conditions, it accumulates in submarine lakes of liquid CO₂ (Lupton et al 2006; Inagaki et al, 2006)”. We are discovering more of Earth’s secrets everyday and much of what we now know was unknown when the IPCC teams started carving hockey sticks.

Human beings **deserve** to live in the world we create. But we do not deserve to be ignorant slaves in the diminished world of elitist controls. We will overcome the Climatologist blight on science and the elitist blight on reality. Some of the actors in this episode might just now be realizing that they have been played. My message to all is, wake up and step from beneath this green shadow into Le Claire Nouveau.
